

Response to Intervention Evaluate Phase: 3-Point Rule

3-Point Rule: If the last 3 data points are...	Then...
Above the goal line and the goal score	Intervention was successful! You can: <ul style="list-style-type: none"> • Remove student from the intervention (student has reached his/her goal). • Increase the goal of the student.
Above the goal line but NOT at goal score	Continue intervention until goal score is reached (intervention is working).
Both above and below the goal line (or you have one outlier data point)	Continue implementation of intervention until data is consistent . Determine causes of outlier data if necessary.
Below the goal line	Student is not responding to the intervention; do not continue as is. Evaluate fidelity of each phase of RtI and discuss potential next steps.
