Standard K.OA.1

CCSS: K.OA.1. Represent addition and subtraction with objects, fingers, mental images, drawings, sounds (e.g. claps) acting out situations, verbal explanations, expressions, or equations.

Common Misconceptions:
- Some students might not see zero as a number. Avoid using the word none to represent this situation.
- Caution against moving students too soon from modeling to writing expressions.
- Provide instructional experiences so that students progress from the concrete level, to the pictorial level, then to the abstract level when learning mathematical concepts.

Intervention Activity: Story, Story

Materials:
- Different colors snap cubes
- Building Towers Activity Mat
- Student Recording Sheet

Directions:
1. Tell students that you are going to tell them some story problems and they can solve the problems using whichever way they like: act out, draw a picture, use manipulative, use the provided equation “frame” and number cards, etc.

2. Choose 2-3 story problems for students to solve:
   a. Joe had 9 blocks and gave 5 to Bill. How many blocks does Joe have left?
   b. Al has 4 red balls and 6 blue balls. How many balls does he have in all?
   c. Sarah has 5 marbles. Barb has 2 more than Sarah. How many marbles does Barb have?
   d. Lisa has 10 blocks. Some are blue. 6 are red. How many are blue?
   e. Mary had 8 cookies. She ate 2. How many coolies are left?

Look Fours:
Watch how students solve the problem(s):
- Which strategy do they use to solve?
- Do they try several different strategies to solve, or just one?
- Can the students explain their thinking?
- Do the students double-check their work?
- Did some students apply a correct strategy, but get an incorrect answer? Can they “fix it” if prompted?

Collecting Data:
Student performance can be scored with a provided task rubric or a rubric created by the teacher.
Data can be recorded on a score sheet.
